

Argus PC Specifications

All Argus Titan systems require one PC to be used as the **Argus Server PC** at the **Access Point** controller location. Other remote PCs can also connect to the control system *through* the Argus Server PC via LAN or Internet. Argus provides the software for these operator access options.

The Server PC

An **Argus Server PC** is connected to the **Titan Access Point** controller. Argus provides proprietary software for using this PC to:

- Provide **Operator Access** to the connected control system
- **Save archival data** and **back up control system settings** to the PC hard drive
- **Serve Argus data** to other PCs connected as Argus Clients across a local network or the Ethernet

The Argus Server PC must be left running continuously for the best operating performance, uninterrupted remote system access, and to facilitate the automatic transfer of recorded data from the controllers. We recommend that you use it exclusively or at least primarily for accessing and managing your Argus system.

Server PC Specifications

Ram	<ul style="list-style-type: none">• 8GB (4GB is sufficient for systems with less than 10 controllers)
Processor	<ul style="list-style-type: none">• Quad Core
Hard Drive	<ul style="list-style-type: none">• 1 TB 7200 RPM (500 GB is sufficient for systems with less than 10 controllers)
OS	<ul style="list-style-type: none">• Windows Professional 7 or 8 or Windows Server 2008 or 2012
Additional Features	<ul style="list-style-type: none">• Standard: Ethernet, USB, keyboard, mouse, video, sound.• Optional: Modem (only required for older dial-up connections).
Monitor	<ul style="list-style-type: none">• 22" or larger screen is recommended (minimum: 1680 x 1050, recommended: 1920 x 1080)

Remote Client PCs

Most reasonably up-to-date PCs will provide satisfactory performance when connected as remote clients to the Argus Titan system. Operating systems from Windows 7 and up can be used for remote client connections. Performance may suffer on machines with slower processors and less than 2 GB of RAM. Performance will also degrade with slow Internet connections or very slow network speeds.

Note: We expect to release a new version of the Argus client software in 2014. Modem connections will no longer be supported in the new operator interface.
